Don't Trust to Luck.

You cannot afford to subscribe for a paper that you run a chance of being dissatisfied with. Therefore I say don't trust to luck but subscribe for the paper that is admitted by all to stand high as a farmers' trade journal. THE NATIONAL STOCKMAN AND FARMER is authority on all agricultural and stock topics. Each department is complete with live articles treated briefly. The leading topics of the hour are discussed practically by practical writers. Its market reports are made a special feature and acknowledged to be the best published for the general farmer and stock raiser. Most of the leading market centers are represented, and are in every way reliable and trustworthy. Many subscribe for this feature alone. Agriculture, horticulture, poultry, dairy, the apiary, live stock, and in fact all matters of interest to the general farmer and stock raiser, and pertaining to business and social life are discussed for the good of its readers from a practical and scientific standpoint. Sample copies may be had free by addressing THE NATIONAL STOCKMAN AND FARMER, Pittsburgh, Pa. I will be pleased to take your order to start from the date I receive it to January 1, 1897, for one dollar. Subscribe now and get the most for your money.

Animal Fur.

Fur is a thread-like fiber which grows out of the pores of the skins of animals. It grows in length from the root, and not from the top, as with vegetable productions. The lower portion merely lengthens out, and the top projects forward, consequently, if once cut, it will always remain blunt. It is tubular and filled with oil, which gives to the fiber its color. In addition to the oil it contains mineral matter, among which are sulphur and iron. A close examination of the fiber will, to a certain extent, show the section of the country the animal inhabits. The short and crisp, with an oval or angular cross section, indicates tropical growth; the long and soft, with circular cross section, a Northern climate. The fibers from different structure and value, that which is taken from the back of a land animal being the finest, while the reverse is true of the animal which confines itself mostly to water, the belly being much finer than the back.

Last of the Lectures.

From Tuesday's Daily.

The lecture given in the opera house last night was the best of the series. Full of good, sound reasoning, showing the weakness of arguments used against the popular side of the question, for we hold that the popular side is the right side. To-night, the last evening she will speak to us, is to be a "benefit" in her favor. Ten cents admission. Fill the house, and hear the popular lecture "Sowing and Reaping or Sense and Nonsense."
